

Helping Doctors Provide Healthcare Anywhere, Anytime

Healee — Your virtual practice

Healee is a telemedicine platform that helps doctors build a virtual practice and provide telemedicine consultations to patients through convenient and accessible virtual contact.

Healee helps doctors deliver better and more comprehensive care, and achieve higher patient satisfaction and retention.

The platform consists of two separate but interlinked mobile applications - Healee for patients and Healee MD for doctors. Doctors and patients can download the mobile app or register through our web version.

Benefits

Better Care, Happy Patients

Provide more comprehensive access to healthcare via your phone, tablet, or desktop where new and existing patients can reach you.

Adopting telemedicine in your practice adds an extension to your face-to-face consultations and results in higher patient satisfaction and retention. You can get in touch with your patients for online consultations, follow-up checks, or long-term monitoring.

Higher Revenue

With telemedicine, you support your traditional care delivery by adding a new revenue stream. Healee is a quick and convenient way for you to get paid for your time and expertise. You set your own price, and you decide whether and when you charge patients, using Healee's rich patient billing options.

Benefits

Time Efficiency

Healee helps you be more efficient and flexible by providing features aimed at facilitating patient engagement and minimizing cancellations and no-shows: scheduling, online booking, mass message campaigns. Moreover, Healee offers an AI tool that gathers and summarizes information from patients prior to the consultation, to help you save time.

Super-quick Onboarding

You can start using Healee within a day! All you need to do is download the app via Google Play or App Store (alternatively, you can use our web version at app.healee-md.com), register, get your profile verified within a few hours, and start your online consultations right away.

Features

Doctor Profile - Fast To Create, Easy To Share

Once you register, we will verify your profile and you can start your online consultations instantly. We also set up a unique Healee page for you that you can use to spread the word and notify your patient base that you are launching online consultations.

 Online consultation

We also create a dedicated Healee button to embed on your website so that new and current patients can start a telehealth consultation right away. No need for extra integration efforts, we provide you with everything you need.

Features

Rich Communication Options

Connect with your patients using a rich set of options: secure, live HD video calls, audio calls, chat, pre-recorded video messages. Send and receive audio and video messages from patients before or during the consultation, or use Healee's medical-grade speech recognition tool that allows dictating messages to patients.

You can create mass message campaigns and send them to all your patients at once, to let them know of important changes in your schedule, availability, upcoming screening campaigns, or more.

Easy Access to Patient Data

With Healee, your patients can send various types of data and documents to you before, during, or prior to the consultation. These include:

- medical data (vitals, past and present symptoms and conditions, treatments, medication schedules)
- medical images (both static and dynamic)
- lab results
- files (pdf and other attachments)

Features

Patient Monitoring

Healee helps you track changes in your patients' health status (vitals, conditions, symptoms, treatments, medications, allergies, etc) by subscribing to patient data on the app. Get notified about these health changes and run reports like the "Condition history" or "Most Frequent conditions" report, etc.

Comprehensive Payment Options

Healee has made monetization extremely easy. We offer multiple patient billing options: out-of-pocket payments, insurance payments & co-pay models.

You can choose to have patients pay before or after the consultation. We also offer concierge, or subscription plans, letting you set all the parameters – price, duration, number of consultations.

Features

Personal AI assistant and custom medical forms

Save time and get all the information you need from patients prior to the consultation, using our AI-guided Personal assistant and custom medical forms.

The Personal assistant holds a conversation with patients to gather details about their overall condition and symptoms, and then provides a summary of the conversation to you and the patient.

In addition, you can create predefined medical forms, with custom questions, that you can send to patients to fill in prior to each consultation.

Scheduling and Booking Services

Healee enables patients to book appointments with doctors via our online booking service - Healee Appointments.

Patients can access your calendar and book online consultations or in-person visits. You can set and edit your own schedules, and see all upcoming patient appointments in a virtual waiting room.

Features

Categorize your patients

Heelee allows you to group your patients into different categories (pregnant, diabetics, hypertensive, undergoing rehabilitation, etc.) and easily navigate the list from the Patients section. You can put notes for each one of them for your own convenience and use the categories to find a particular patient easily.

Privacy and Security

Heelee is HIPAA and GDPR compliant.

Heelee guarantees confidentiality and protection of all health data shared by your patients in the application. All details provided during registration as well as all medical history, lab results, and images are kept safe and encrypted on our servers and only you and the patients have access to it.
